Household Goods Volume Reference Guide

The following samples are meant to be used as a guidance in helping you calculating the volume of your goods for shipping. Please remember that volumes will vary from model to model and also depend on the manufacturing specifications.

Now, first the basics. In order to calculate the volume of any given object, you have to take all the 3 dimensions in inches and multiply them one by other (Length x Height x Width). Now, divide the result by 1728 and you have the volume in cubic foot (cbf). If you now divide the cubic foot resulting volume by 35.3145 you get the volume in cubic meters (M3).

For a non-bidding estimate, please visit our [Free Quote](#) and input your information there or just email us at quote@shipgcl.com with all your information.

Average volume per household: (in cbf)

1 Bedroom - 300

2 Bedroom - 500

3 Bedroom - 800

Sofa large	65	Sofa small	45	Dresser small	40
